1. Delete the lid from assembly

2. Make both the hinges flexible in your assembly as shown.
3. Insert the lid again into the box assembly.

4. Add a coincident mate between top of lid and bottom face of hinge as shown in pic.
5. Add a width mate between side faces of lid and box as shown in above pic.
6. Add a distance mate between 2 faces as shown (One of the face from hinge and another face is from lid. I have given around 13 mm).

7. And now, here you go, your lid is working as you expect.
